The Ruminant Immune System In Health And Disease

Synopsis

First published in 1986, this volume reviews the immune system of domestic ruminants, with particular emphasis on mechanisms of immunity and resistance to infectious diseases. Topics of comparative interest in other species are also covered. The cellular components of the immune system are discussed first, including ontogeny, structural organization and how they interact during the generation of immune responses. This is followed by information on specific aspects of humoral and cell-mediated immune responses, and finally a section on the relevance of various types of immune responses in protection against a number of important infectious diseases of ruminants. The papers included were presented originally at an international conference held in Nairobi, Kenya in September 1983. They provide authoritative coverage of a wide range of topics in ruminant immunology. Together, they comprise a valuable reference text for those involved in all aspects of immunological research in ruminants.

Book Information

Paperback: 600 pages

Publisher: Cambridge University Press; 1 edition (July 23, 2009)

Language: English

ISBN-10: 0521115477

ISBN-13: 978-0521115476

Product Dimensions: 6 x 1.3 x 9 inches

Customer Reviews

It's a good reference for the basics of ruminant immunity. But not suitable for someone interested in the molecular and receptor biology of ruminant organs. Of course it's an older book and should not be expected to cover these important issues for researchers in the field. But it is a good source book for basic immunology in these animals.
